PROJECTS

Main project website; Baffawuah.github.io

Netpacket Tracking app (2017) : A personal project that tracked the packets flowing in and out of a computer and created a graph comparing what locations were sending your personal computer the most data.

Android App (2017): A Student project that tries to use various questions and data points to pinpoint what major a student would be most comfortable in. It also tries to accurately describe and give 'homework' to show the student the various kinds of tasks that would be expected of someone working in that field

Leadmanager (2019): Developed a rudimentary lead management system with a Django backbone. Very light weight and its purpose is to store sales leads for a small business.

React Recipe Search (2019): A Simple Recipe Search program using React as the framework. Makes calls to Food2Fork
